

# DINESH BODHE

+91 8 [REDACTED] — [REDACTED]@gmail.com — linkedin.com/in/dinesh-bodhe — github.com/RecursiveMind21

## EDUCATION

**B.Tech in Computer Technology**, Minor in Software Systems  
Yeshwantrao Chavan College of Engineering, Nagpur

July 2023 – July 2027  
CGPA: 8.52/10.00

## EXPERIENCE

**Software Developer Intern**  
*GBJ Buzz, Nagpur*

April 2025 – September 2025  
*Remote*

- Designed, developed, and tested software modules in **Java (JDK 17) and Spring Boot**, cutting average document-processing time by 35% across high-volume DOC/JPG/PNG conversion requests for the product *Printable*.
- Debugged and troubleshooted backend issues across critical production flows, identifying root causes and implementing fixes that reduced downstream errors.
- Incorporated feedback from senior engineers through **code reviews** and **Agile** ceremonies (sprint planning, daily standups), iterating on pull requests to improve code quality and collaborating with cross-functional teammates to ensure on-schedule delivery.
- Automated an AI-powered PPT-generation pipeline via backend service integration, cutting manual presentation-prep time by 68%.

## PROJECTS

**HealthConnect** – Healthcare Software Platform  
*Spring Boot, React.js, JWT, Redis, Elasticsearch, Gemini API*

November 2025 – March 2026  
Backend — Frontend

- Designed, developed, and tested a full-stack healthcare application end-to-end – from **React.js** frontend to **Spring Boot** backend request handling – cutting average API response time by 25% under concurrent load across 10+ endpoints via Redis caching and Elasticsearch-backed search.
- Designed secure, stateless authentication with **JWT** and role-based access control (RBAC) for 4 user roles (patients, doctors, admins, labs), debugging and resolving access-control edge cases through iterative testing.
- Documented API specifications and setup instructions for both services, and integrated the Gemini API to auto-generate summarized clinical insights, cutting manual review time by 40%.

**API Optimizer Starter**  
*Java 21, Spring Boot, Hibernate, JDBC, ThreadLocal, Ollama*

February 2026 – March 2026  
GitHub — Video — Maven Central

- Independently researched **JDBC** and **Hibernate** internals – an unfamiliar system with no prior documentation – to architect a zero-config **Spring Boot** starter that detects REST API performance issues at runtime.
- Designed a 4-layer JDBC proxy chain intercepting 100% of SQL statements per HTTP request across 5+ endpoints, surfacing query issues missed by Hibernate Statistics through self-directed debugging.
- Wrote developer-facing documentation and integrated the Ollama API to auto-generate natural-language optimization suggestions per endpoint.

## SKILLS

- Languages:** Java , SQL
- Core CS:** Data Structures & Algorithms (DSA), Operating Systems, Database Management System (DBMS), Object-Oriented Programming (OOP)
- Tools & Methodology:** Git, GitHub, Agile/Scrum (sprint planning, standups, code reviews), Maven, Postman, Unit Testing, Linux
- Backend & APIs:** Spring Boot, Spring MVC, Spring JDBC, Hibernate, RESTful API Design
- Cloud:** Amazon AWS, EC2, RDS, Docker
- Security:** Spring Security, OAuth2, JWT, CORS Policies
- Databases & Caching:** PostgreSQL, Redis, Elasticsearch
- Generative AI:** Ollama, Gemini API

## CERTIFICATIONS AND ACHIEVEMENTS

- National Hackathon Winner** – Enduraverse, Endurance Technologies Challenge 2026
- HackNexus Hackathon Winner** 2025
- Java Programming Certification**, offered by Amazon Web Services (*via Coursera*) – Verify 2025
